

Remote Monitoring and Control of DC Power Systems

Alan Greene
EnCharge Power Systems

Industrial Shifts

Industrial revolution

- Shift from people to machines
- Faster
- Safer

Assembly Line

- Machines linked together
- Streamline production
- Remove another layer of human interaction

Computer Age

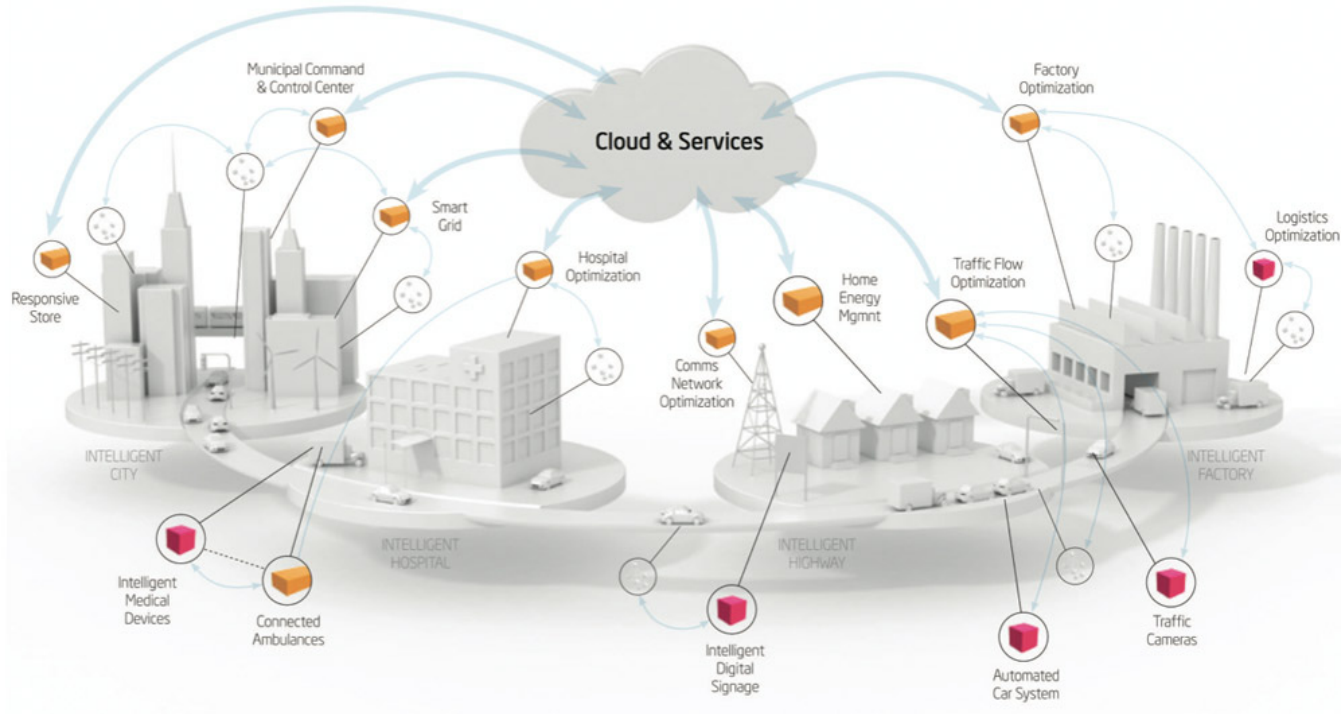

- Vastly Increased calculating power
- Enabled dramatic changes in productivity
- Advances in Science

Internet/World Wide Web

Connectivity of Objects/Internet of Things

- Data is Safer
- Accessible from anywhere

How do these technologies relate to Batteries?

Batteries are the center of all critical power applications

Utility

- New smart grids make utility switchgear more important than ever

Renewables

- Storage-fluctuating demand
- Mobile assets- batteries for other applications
- Remote locations

Telecom

- Cellular technology is a fact of life
- Many towers are in remote locations
- Monitoring reduces truck rolls

Rail

- Rail Crossings
- Switch machines
- Switch heaters
- Very remote locations

UPS

- Near Instantaneous emergency backup power
- Computers, data centers

Manufacturing

- Communication
- Backup
- Switchgear

Hospitals

- Generators are not always operational
- Not just lights, but also lab tests and life support

When batteries fail, time, money,
and even lives can be lost

Why Monitor?

- Timeliness
- Accuracy
- Safety

What exactly does remote battery monitoring do?

Precise
Information

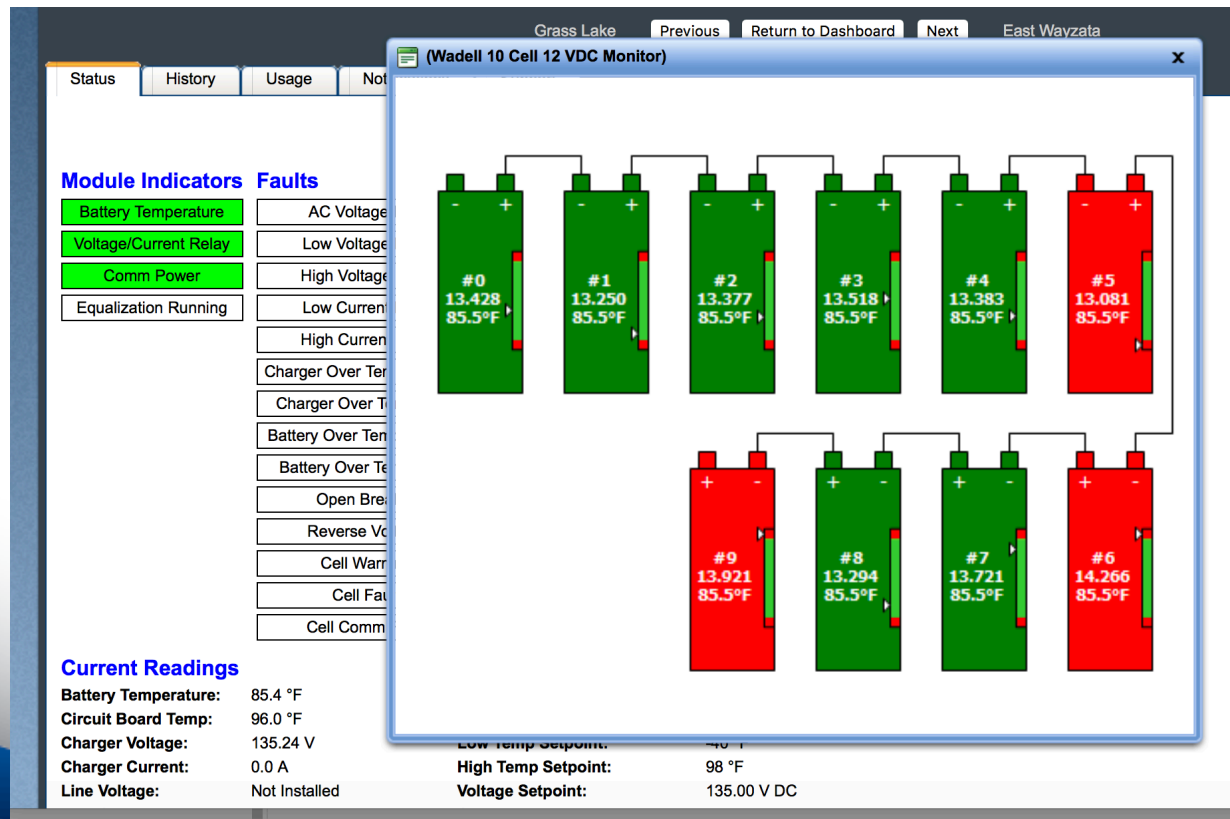

Past
Present
Future

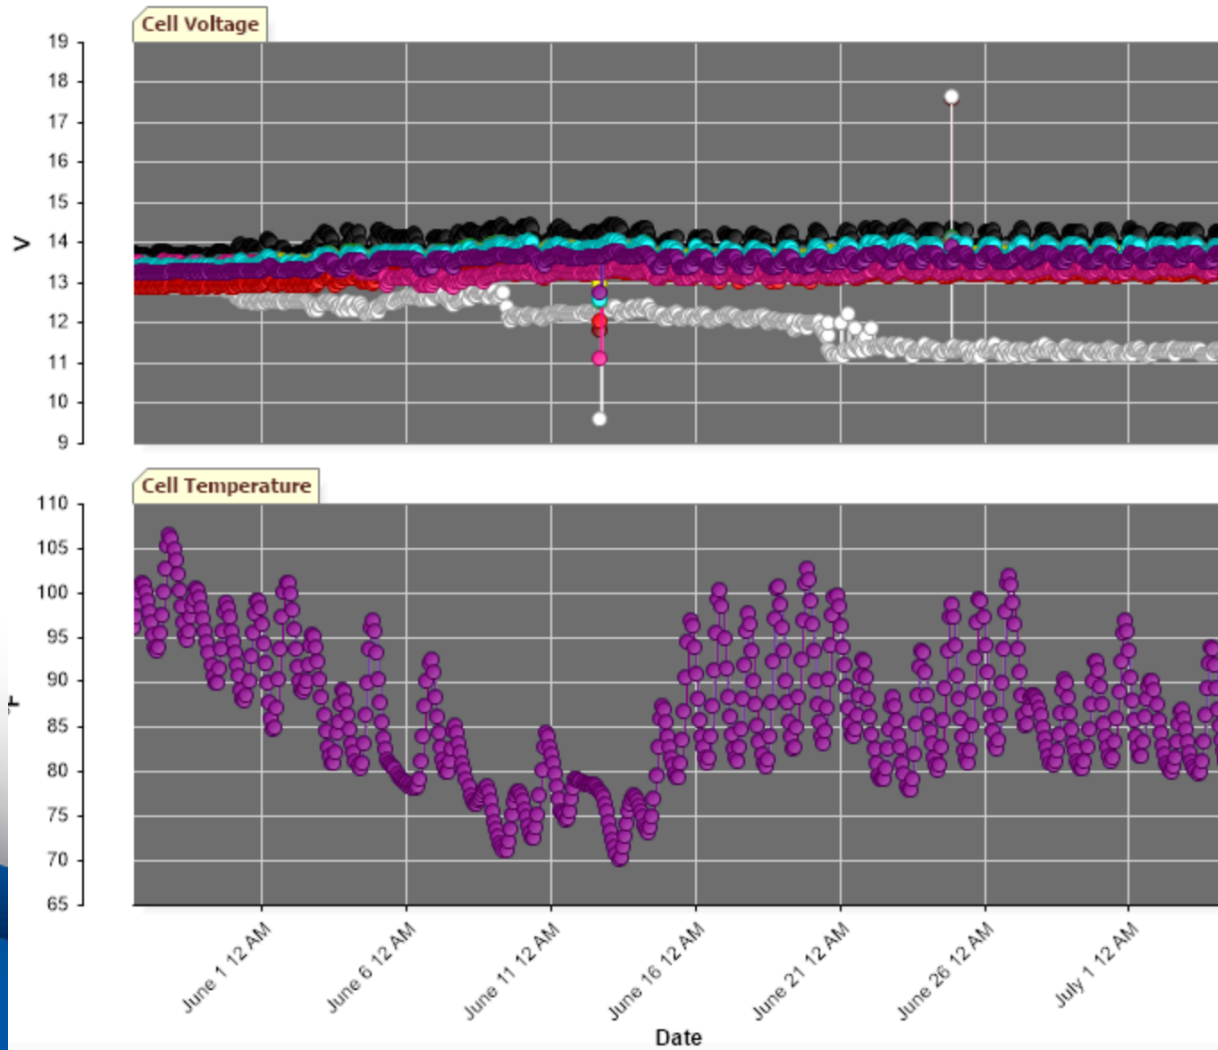

Cloud
Hosted

Past

Future

Test Results for VRLA Cells

What can this information prevent?

- Thermal runaway
- Preventable large thermal events (fires, explosions)
- Undercharge
- Injury or death

Control

RECo

Settings

Monitor Settings

This page allows the configuration of the board's internal settings.

Enter the new settings for the board below:

Password:	<input type="text" value="0"/>
Machine Serial Number:	<input type="text" value="30002"/>
Charger Type:	<input type="text" value="12VDC/20AMP"/> ▾
Battery Type:	<input type="text" value="Lead Acid"/> ▾
Number of Cells:	<input type="text" value="6"/>
Volts Per Cell:	<input type="text" value="2.250"/> Volts **Total Voltage(13.50)**
Temperature Compensation:	<input type="text" value="Off"/> ▾
Current Setpoint:	<input type="text" value="21.5"/> Amps
Update Interval:	<input type="text" value="5"/> Min
Total Second Counter:	<input type="text" value=""/> **Currently(418)**
High Battery Temp Setpoint:	<input type="text" value="160"/>
Low Battery Temp Setpoint:	<input type="text" value="-40"/>
High Voltage Setpoint:	<input type="text" value="22.0"/> Volts
Low Voltage Setpoint:	<input type="text" value="0.0"/> Volts
High Current Setpoint:	<input type="text" value="22.0"/> Amps
Low Current Setpoint:	<input type="text" value="0.0"/> Amps
Charger Frequency Setpoint:	<input type="text" value="50000.0"/> HZ
Equalization Frequency:	<input type="text" value="0.00"/> Days **Currently(0.00)**

Cloud storage of data

- Accessible
- Safe
- No software to install/maintain

Motive Power Applications

- Voltage
- Current
- Fluid levels

Regulatory Environment

- NERC PRC-005
- FRA

Conclusion

- Immediate and constant data
- Historic data
- System projections
- Tremendously safer
- Prevents downtime
- Reduces truck rolls
- Bottom line, save money and in some cases, lives.
- Regulations are changing so that these technologies will not only help with compliance by in many cases be necessary
